Appl. No. 09/759,742 Amdt. dated August 5, 2005 Reply to Advisory Action of May 23, 2005

This listing of claims replaces all prior versions, and listings of claims in the instant application:

Listing of Claims:

1. (Currently Amended) A computer-based method comprising:

receiving a request for data;

retrieving, from a filter registry in response to said request, a rule set for a plurality of partial filter adapters wherein, upon being chained together said plurality of partial filter adapters converts source data to said data; and

building a filter using said rule set wherein said filter comprises a chain of said plurality of partial filter adapters wherein each partial filter adapter includes a generic <u>data</u> format independent interface and said generic <u>data</u> format independent interface is used in passing data from one partial filter adapter in said plurality of partial filter adapters to another partial filter adapters; and

processing a subset of the source data by said filter to produce said data.

- 2. (Cancelled)
- 3. (Currently Amended) A computer-based method comprising:

receiving a request for data from a device;
determining data formats supported by said device
wherein said data formats includes at least two data
formats including at least a second data format and a
third data format;

GUNNISON, McKAY & HODGSON, L.L.P. Garden West Office Plaza 1900 Garden Road, Suite 220 Monterey, CA 93940 (831) 655-0880 Fax (831) 655-0888

Amdt. dated August 5, 2005

Reply to Advisory Action of May 23, 2005

selecting said second data format for a format of said data;

retrieving, from a filter registry in response to said request, a rule set for a plurality of partial filter adapters wherein, after being chained together said plurality of partial filter adapters can be used to convert source data to said data; and

building a filter using said rule set wherein said filter comprises a chain of said plurality of partial filter adapters wherein each partial filter adapter includes a generic <u>data</u> format independent interface and said generic <u>data</u> format independent interface is used in passing data from one partial filter adapter in said plurality of partial filter adapters to another partial filter adapters wherein said plurality of partial filter adapters wherein said filter converts said source data from a first data format to said second data format.

4. (Cancelled)

5. (Previously Presented) A method according to Claim 3, wherein said selecting said second data format further comprises:

using a selection scheme including at least one of the following criterion: storage space required by said data in each of said at least two data formats supported by said device; conversion time for said data from said first data format into each of said at least two data formats supported by said device; and a quality for each of said at least two data formats.

6. (Cancelled)

Appl. No. 09/759,742

Amdt. dated August 5, 2005

Reply to Advisory Action of May 23, 2005

- 7. (Original) The method of Claim 1 wherein said generic format independent interface is a Simple API for XML interface.
- 8. (Currently Amended) A computer-based method comprising:

receiving a request for data;

retrieving, from a filter registry in response to said request, a rule set for a plurality of partial filter adapters wherein after being chained together said plurality of partial filter adapters can be used to convert source data to said data; and

building a filter using said rule set wherein said filter comprises a chain of said plurality of partial filter adapters wherein each partial filter adapter includes a generic <u>data</u> format independent interface and said generic <u>data</u> format independent interface is used in passing data from one partial filter adapter in said plurality of partial filter adapters to another partial filter adapters wherein each partial filter adapter in said plurality of partial filter adapter in said plurality of partial filter adapters comprises a general partial filter adapter having functionality determined by a parameter.

- 9. (Original) The method of Claim 8 wherein said general partial filter adapter comprises an eXtensible Style sheet Language Transformation processor, and said parameter comprises an eXtensible Style sheet Language Transformation script.
- 10. (Currently Amended) A computer program product comprising a medium configured to store or transport computer readable code for a method comprising:

receiving a request for data;

Amdt. dated August 5, 2005

Reply to Advisory Action of May 23, 2005

retrieving, from a filter registry in response to said request, a rule set for a plurality of partial filter adapters wherein, upon being chained together said plurality of partial filter adapters converts source data to said data;

building a filter using said rule set wherein said filter comprises a chain of said plurality of partial filter adapters wherein each partial filter adapter includes a generic <u>data</u> format independent interface and said generic <u>data</u> format independent interface is used in passing data from one partial filter adapter in said plurality of partial filter adapters to another partial filter adapters; and

processing a subset of the source data by said filter to produce said data.

- 11. (Cancelled)
- 12. (Cancelled)
- 13. (Currently Amended) A computer-based method comprising:

receiving a request for data having a first format from a process requiring data in one of at least two data formats including at least a second format and a third format;

selecting said second format;

retrieving, from a filter registry in response to said request, a rule set for a plurality of partial filter adapters wherein, after being chained together said plurality of partial filter adapters can be used to convert said data from said first format to said second format; and

GUNNISON, McKAY & HODGSON, L.L.P. Garden West Office Plaza 1900 Garden Road, Suite 220 Monterey. CA 93940 (831) 655-0880 Fax (831) 655-0888

Amdt. dated August 5, 2005

Reply to Advisory Action of May 23, 2005

building a filter using said rule set wherein said filter comprises a chain of said plurality of partial filter adapters wherein each partial filter adapter includes a generic <u>data</u> format independent interface and said generic <u>data</u> format independent interface is used in passing data from one partial filter adapter in said plurality of partial filter adapters to another partial filter adapters.

14. (Cancelled)

15. (Previously Presented) A method according to Claim 13, wherein said selecting said second data format further comprises:

using a selection scheme including at least one of the following criterion: storage space required by said data in each of said at least two data formats supported by said process; conversion time for said data from said first data format into each of said at least two data formats supported by said process; and a quality for each of said at least two data formats.

16. (Original) The method of Claim 13 further comprising:

converting said data in said first format to data in said second format using said filter.

- 17. (Original) The method of Claim 13 wherein said generic format independent interface is a Simple API for XML interface
- 18. (Currently Amended) A computer-based method comprising:

GUNNISON, McKAY & HODGSON, L.L.P. Garden West Office Plaza 1900 Garden Road, Suite 220 Monterey, CA 93940 (831) 655-0880 Fax (831) 655-0888

Amdt. dated August 5, 2005

Reply to Advisory Action of May 23, 2005

receiving a request for data having a first format from a process requiring data in a second format;

retrieving, from a filter registry in response to said request, a rule set for a plurality of partial filter adapters wherein after being chained together said plurality of partial filter adapters can be used to convert said data from said first format to said second format; and

building a filter using said rule set wherein said filter comprises a chain of said plurality of partial filter adapters wherein each partial filter adapter includes a generic data format independent interface and said generic data format independent interface is used in passing data from one partial filter adapter in said plurality of partial filter adapters to another partial filter adapters wherein each partial filter adapter in said plurality of partial filter adapter in said plurality of partial filter adapters comprises a general partial filter adapter having functionality determined by a parameter.

- 19. (Original) The method of Claim 18 wherein said general partial filter adapter comprises an eXtensible Style sheet Language Transformation processor, and said parameter comprises an eXtensible Style sheet Language Transformation script.
 - 20. (Previously Presented) A structure comprising: a memory including a partial filter adapter library; and a partial filter adapter registry wherein said partial filter adapter registry includes a rule set; and
 - a filter server, coupled to said partial filter adapter registry and to said partial filter adapter library, comprising:

Amdt. dated August 5, 2005

Reply to Advisory Action of May 23, 2005

a conversion service;

a protocol reader coupled to said conversion service;

a chain factory coupled to said conversion service:

a service manager coupled to said chain factory and to said partial filter adapter library; and

a filter registry service coupled to said chain factory and to said partial filter adapter registry wherein said filter server uses said rule set to build a filter using a plurality of partial filter adapters from said partial filter adapter library.

21. (Currently Amended) A structure comprising: a processor; and

a memory coupled to said processor and having stored therein computer program instructions wherein execution of said computer program instructions on said processor generates a method comprising:

receiving a request for data from a device;
determining data formats supported by said
device wherein said data formats includes at least
two data formats including at least a second data
format and a third data format;

selecting said second data format for a format of said data;

retrieving, from a filter registry in response to said request, a rule set for a plurality of partial filter adapters wherein, after being chained together said plurality of partial filter adapters can be used to convert source data to said data; and

building a filter using said rule set wherein said filter comprises a chain of said plurality of partial filter adapters wherein each partial filter

adapter includes a generic <u>data</u> format independent interface and said generic <u>data</u> format independent interface is used in passing data from one partial filter adapter in said plurality of partial filter adapters to another partial filter adapter in said plurality of partial filter adapters wherein said filter converts said source data from a first data format to said second data format.

- 22. (Original) The structure of Claim 21 wherein said generic format independent interface is a simple API for XML interface.
- 23. (Original) The structure of Claim 22 wherein said simple API for XML interface is a XML document handler interface.
- 24. (Previously Presented) A method for rendering accessible data stored in a first data format in a first computer system for a second computer system supporting a second data format, said method comprising:

receiving in said first computer system a request from said second computer system for said data;

receiving in said first computer system information about at least one data format supported by said second computer system;

selecting said second data format, if said first computer system was informed about more than one data format supported by said second computer system;

comparing in said first computer system said first data format with said second data format,

generating a filter for converting said data from said first data format into said second data format, if said first data format is incompatible with said second

GUNNISON, McKAY & HODGSON, L.L.P. Garden West Office Ptaza 1900 Garden Road, Suite 220 Monterey, CA 93940 (831) 655-0880 Fax (831) 655-0888

data format, by combining a first partial filter adapter to a second partial adapter for the transformation of data; and

converting said data in said first computer system, using said filter, from said first data format into said second data format.
